PROFESSIONAL SUMMARY

Results-driven Data Analyst with a B.Sc. in Mathematics Education and a Google Professional Data Analytics Certification. Proficient in Excel (Power Query, VBA, Macros), SQL, Power BI, and Python (Pandas, NumPy, BeautifulSoup, Selenium) for data cleaning, ETL, web scraping, KPI tracking, and dashboard reporting. Experienced building business intelligence solutions for retail and community health organizations, consistently delivering data-driven decision-making tools that cut manual effort and improve operational visibility. Seeking to bring analytical rigour and stakeholder communication skills to a data analyst role.

SKILLS

Tools: Excel (Power Query, Pivot Tables, VBA, Macros, Dashboards), Power BI, SQL, Python (Pandas, NumPy, BeautifulSoup, Selenium)

Techniques: Data Cleaning, ETL, Dashboard Reporting, KPI Tracking, Trend Analysis, Business Intelligence, Web Scraping, Reporting Automation

Soft Skills: Problem-Solving, Stakeholder Communication, Critical Thinking, Data-Driven Decision Making

WORK EXPERIENCE

Data Analyst & Instructor | Megatek ICT Academy Lagos, Nigeria September 2025 – Present

- Automated data validation and reporting workflows using SQL and Excel, reducing manual processing time by 30% and eliminating recurring reporting errors.
- Designed and deployed Power BI dashboards for internal KPI tracking, improving insight delivery speed and enabling data-driven decision-making across departments.
- Developed and delivered data analytics curriculum to cohorts of 15+ learners, improving average assessment scores by 25% through hands-on project-based instruction.
- Mentored learners on real-world tools including Excel, SQL, and Power BI, producing job-ready analysts capable of building end-to-end reporting pipelines.

Data Analyst (Volunteer) | Community Revolution CIC Remote October 2025 – Present

- Built Power BI dashboards to track community outreach activities and health-related impact metrics, providing leadership with clear visibility into programme performance.
- Cleaned and standardized a dataset of 500+ records, reducing data errors to below 2% and ensuring data integrity for funding reports.
- Produced data-backed impact reports that directly supported community project funding applications, contributing to programme sustainability.

PROJECTS

Retail ERP Sales Automation & Business Intelligence — VBA, Excel, Pivot Tables, Power Query

- Engineered an automated ERP system to centralize fragmented sales records, managing a 100-item inventory database through relational data mapping — eliminating manual reconciliation across departments.
- Built a multi-item Sales Order Form using VBA macro-looping, resolving chronic manual data entry errors and fragmented transaction logs.
- Implemented dynamic sheet-protection toggles in the backend to safeguard formula integrity and prevent unauthorized price modifications.
- Constructed an interactive Executive Dashboard using Pivot Tables and Slicers, giving management real-time visibility into revenue trends and product performance.

- Designed a custom sidebar UI with KPI cards, creating an app-like experience accessible to non-technical retail staff.

QSR Sales Strategy & Profit Optimization — Power BI, DAX, Data Modeling

- Developed a comprehensive Power BI dashboard to evaluate profitability and sales performance across multiple product categories and distribution channels, enabling strategic decision-making for daily operations and marketing spend.
- Identified that Cash and Direct Sales account for over 50% of total profit, and that specific products (e.g. Product30) significantly outperform others — enabling targeted inventory management and channel prioritization.
- Aggregated transactional data to construct average monthly and daily profit profiles, implemented donut charts for payment/channel distribution analysis, and bar charts to rank top-selling products and profit by category.
- Built a robust DAX data model to support cross-category and cross-channel comparisons, improving analytical depth and reducing ad hoc reporting requests from stakeholders.

Automated Web Scraping Pipeline — Python, BeautifulSoup, Selenium

- Built a multi-page web scraper using BeautifulSoup and Requests to extract 1,000 book records (title, price, availability) across 50 paginated pages
- Engineered pagination logic to automatically detect and follow "next page" links until all catalogue pages were exhausted, with HTTP status validation to handle failed requests gracefully.
- Exported the cleaned dataset to a structured CSV file (UTF-8 encoded) ready for downstream analysis, with an average price of £35.07 across all 1,000 titles scraped.
